Notes

- Response time in silicone oil MS200/50. This is the time needed for the sensor to reach 63.2% of the total temperature difference when subjected to a temperature change from 25 °C in air to 85 °C in oil.
- Valid for all types with the exception of 2322 640 5.474.

FEATURES

- Accurate over a wide temperature range (tolerance on B-value between 2.5% and 0.5%)
- Good stability over a long life
- Excellent price/performance ratio
- Flexible leads
- Low heat conductivity through 0.4 mm diameter Ni-leads

APPLICATIONS

- Temperature sensing and control.

These thermistors have a negative temperature coefficient. The device consists of a chip with two tinned nickel leads and is colour coded.

PACKAGING

The thermistors are packed in cardboard boxes; the smallest packing quantity is 500 units.

MARKING

The thermistors are marked with coloured bands; see Dimensions and “Electrical data and ordering information”

MOUNTING

By soldering in any position.
